Problem solving

C/C++

ABOUT ME

An enthusiastic, highly focused young software developer, methodical, with an eye for detail and thrift for challenges.
Looking for an opportunity where I can enhance my experience, be challenged, reach my potential and make great software.

WORK EXPERINCE

Backend Developer

Kairotek Dec 2017 - Current

During this period, I worked primarily as a Django backend developer. I contributed to the development work for the company's main project: 3elag.com, an online platform for connecting patients with pharmacies around them. For 3elag.com, I was responsible for implementing infrastructure modules at the backend that are used by the higher modules at the stack. I was also acting primarily as the maintainer for the project, working on fixing bugs, implementing new features needed by the business, and acting as a second-level support for any urgent issues arising at the production environments.

Backend Developer

Egynco Aug 2015 - Sept. 2016

I joined the company as an intern and I was hired right after my internship. During that time, I worked primarily as a Django backend developer. I contributed to the development work for the company's main project: Bteekh.com, an online entertainment platform for creating and sharing GIFs.

I was responsible for implementing infrastructure modules at the backend that are used by the client side. I was also acting primarily as the maintainer for the project, working on fixing bugs, implementing new features needed by the business, and acting as a second-level support for any urgent issues arising at the production environments.

EDUCATION

Ba.SC Faculty of Computers and Information

Assiut University 2012 - 2016

Graduated 2016 from Assiut University, Computer Science Major.
- Graduation Project : Delta

Android focused project giving the capability to update apps with tiny patches instead of the typical download the whole package and reinstall method.

EXTRA CURRICULAR ACTIVITIES

- ACM ACPC 2013 - Contestant
